

IP Connect

Welcome to Openserve

For years, Openserve has underpinned telecommunications in South Africa.

In recognition of the dramatically changing communications landscape here and around the world, we have recently invested heavily at all levels of our next-generation network.

This is with an eye on building the foundation of an open, vibrant and innovative communications eco-system.

We invite you to take this opportunity to astound your customers with truly innovative products and services that help them work better and communicate easier.

IP Connect

We're committed to lowering the entry barrier to the internet in South Africa.

Lowering prices at wholesale level means more players can enter the market, creating a more vibrant and competitive eco-system with innovative services for consumers.

Openserve's IP Connect bandwidth is uncontended, and truly national, giving you the perfect platform to develop and brand your products and services.

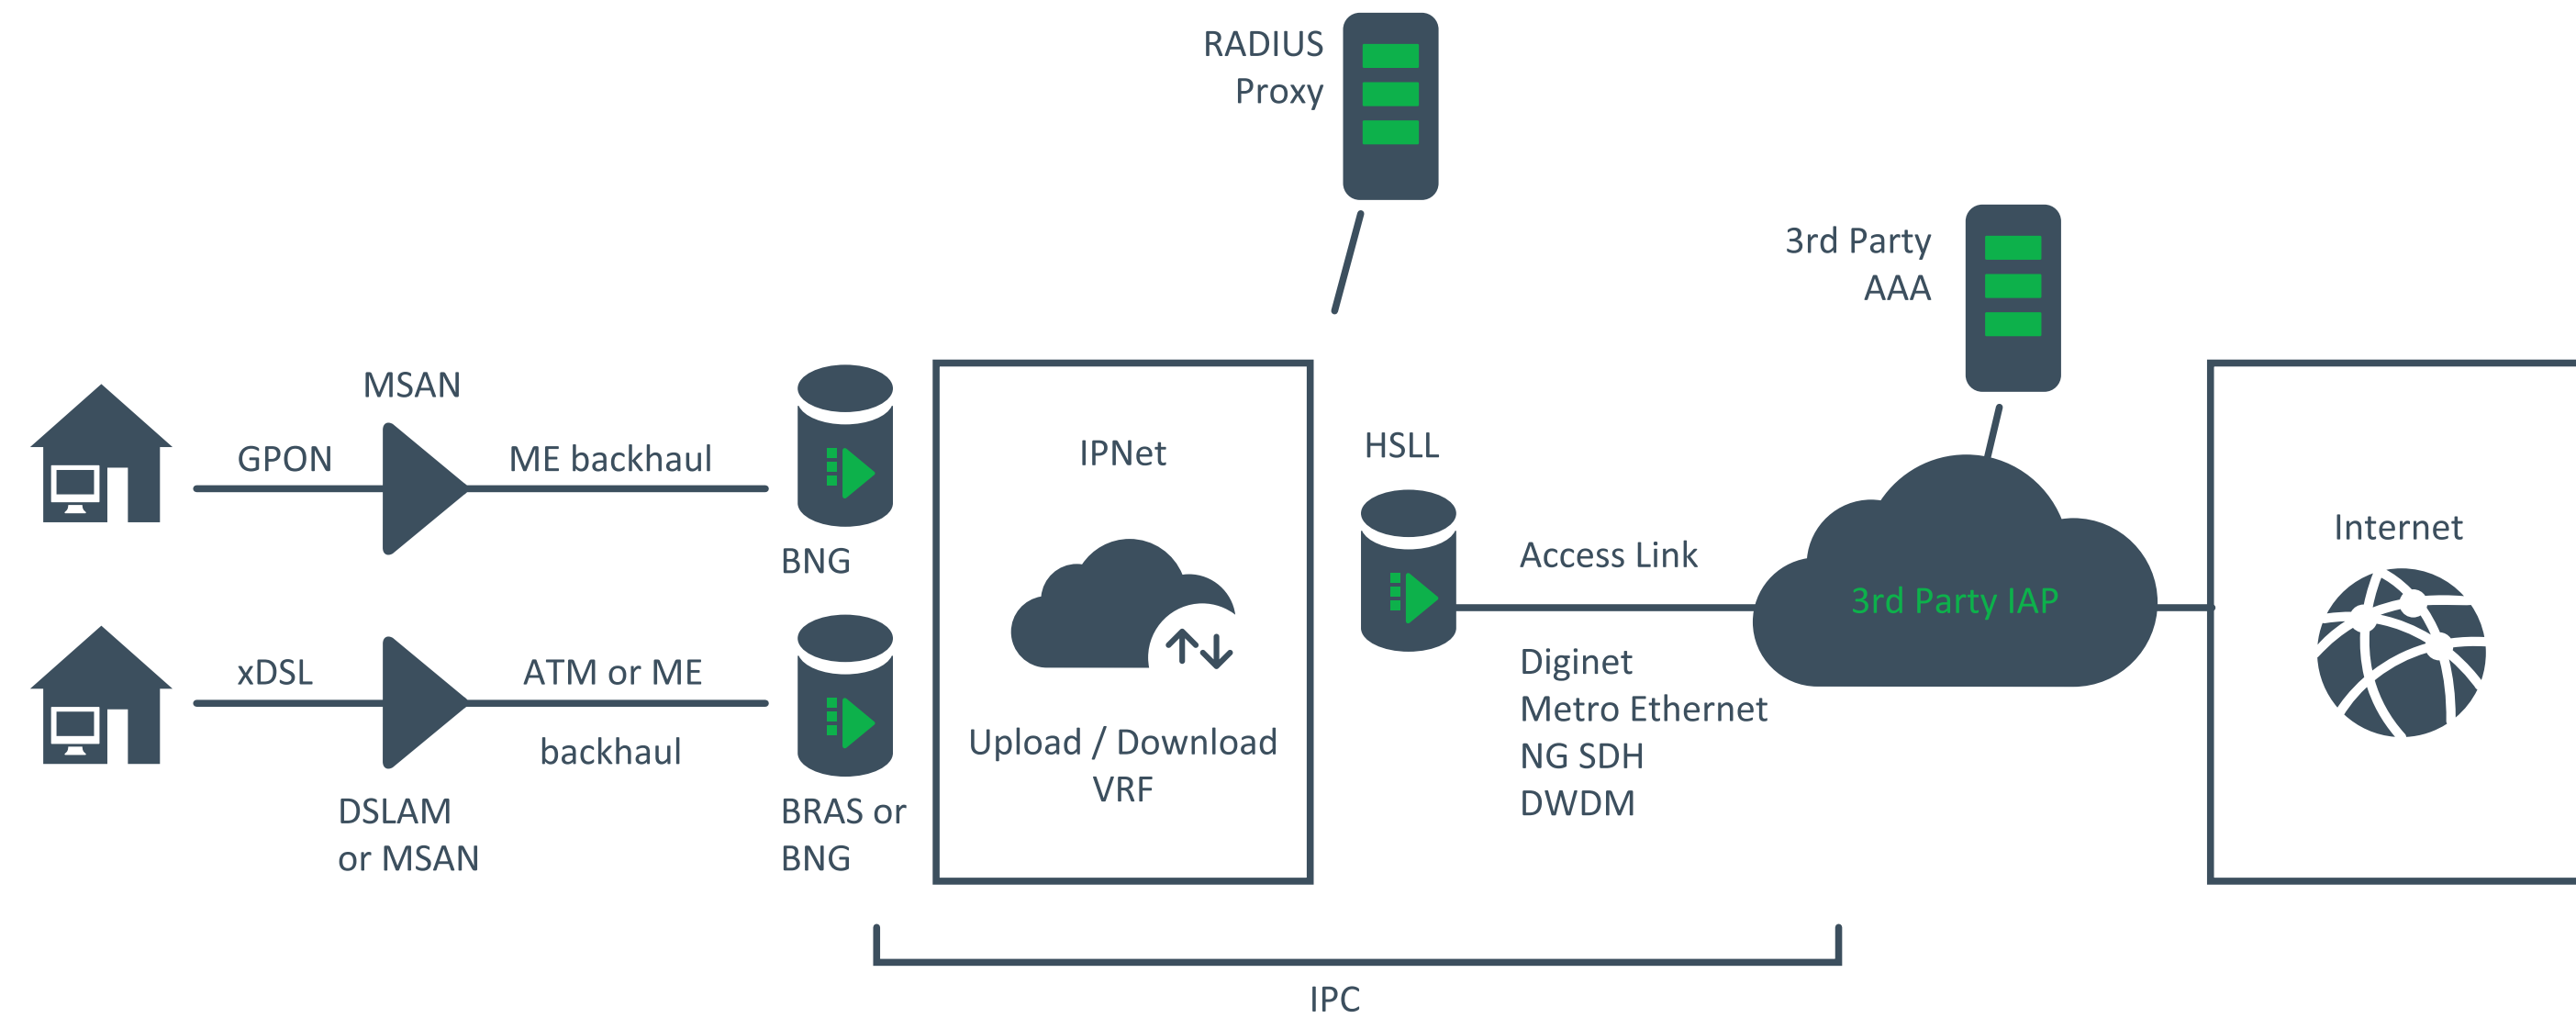

POPs (Point of Presence)

- Offload point of traffic
- Openserve's Network split into 3 Regions
 - North (Gauteng, North East & Central)
 - South (West Cape & East Cape)
 - East (KZN)
- Discount given to customers if multiple POP's in different region are used
 - 1 POP – No Discount
 - 2 POPs – 5% Discount
 - 3 POPs – 10% Discount

IP Connect

Benefits of IP Connect

IP Connect (IPC) provides a simplified solution to Internet Access Providers (IAPs) and Internet Service Providers (ISPs) to supply services to end customers, using Openserve's last mile access technologies.

IPC allows IAPs & ISPs to buy bulk bandwidth and to build their own products with more flexibility and options, i.e. capping rules, session timeouts and shaping.

IP Connect is a best effort service provided over the IP network, exclusively by Openserve.
